English (Medium Level)

📄 ABOUT ME

Software Engineer with more than 3 years of professional experience in the IT field. In recent years it has been committed to projects such as the development of an API web service to maintain communications with the corresponding entities, the development of a management system to carry out control of some functionalities of the entity, the development of mobile applications for the management of commercial communication. During these projects he acquired extensive experience in frontend and backend development, as well as the other steps involved in creating software and the operation of the processes in the entities where it has been developed.

He has developed skills in technologies such as Python, Django, Django Rest Framework, Angular, JavaScript. For database management, he has experience with PostgreSQL and Oracle. For version control, he has experience with Git, GitLab, GitHub.

📁 Professional Experience

Fast2Ship | EMSER

08/23 -

Frontend Develop

10/23

Description:

The project focuses on the development of a system for managing the company's logistics. The system provides capabilities to keep track of receipts, in-stock inventories, ordering and product shipments. It is developed in Angular as a framework.

Responsibilities:

- Implementation of functionalities for the development of the system developed in Angular.
- Obtaining knowledge of the operation of the processes for the development of the system.
- Implementation of Git for version control or performing peer code reviews.

Technologies:

- Angular, Git

Fast2Ship | EMSER

08/23 -

Backend Develop

10/23

Description:

The project focuses on the development of a system for managing the company's logistics. The system provides capabilities to keep track of receipts, in-stock inventories, ordering and product shipments. It is developed in Python with Django as a framework.

Responsibilities:

- Implementation of functionalities for the development of the system developed in Python with Django.
- Obtaining knowledge of the operation of the processes for the development of the system.
- Implementation of Git for version control or performing peer code reviews.

Technologies:

- Python, Django, Git

GoTruck | EMSER

01/23 -

Mobile Develop

07/23

Description:

The project focuses on the development of an application for the management of delivery people. The application provides capabilities to keep track of collections, non-deliveries, locations, among other functionalities. It is developed in Flutter as a framework.

Responsibilities:

- Implementation of functionalities for the development of the application in Flutter.
- Obtaining knowledge of the operation of the processes for the development of the application.
- Implementation of Git for version control or performing peer code reviews.

Technologies:

- Flutter, Dart, Git, Jira, Figma

Description:

The project focuses on the development of an electronic commerce application. The application provides capabilities for purchasing products, keeping track of customers, invoices, knowing your performance and objectives. It is developed in Flutter as a framework.

Responsibilities:

- Implementation of functionalities for the development of the application in Flutter.
- Obtaining knowledge of the operation of the processes for the development of the application.
- Implementation of Git for version control or performing peer code reviews.

Technologies:

- Flutter, Dart, Git, Figma, Jira

National Tax Administration Office

07/22 -

Global Tax Specialist

03/23

Description:

The work focused on the development of API web services and a management system to carry out the management of all the information received and transmitted by the corresponding entities. The system architecture and services include Oracle as a database, Python on the backend and frontend with Django.

Responsibilities:

- Implementation of Api web services and a management system in Python with Django
- Implementation of GitLab for version control or performing peer code reviews.
- Obtaining knowledge of the operation of the entity's different processes to carry out the development of services and systems.

Technologies:

- Python, Django, Django Rest Framework, Oracle, PostgreSQL, HTML, CSS, JavaScript, GitLab

National Tax Administration Office

11/20 -

Specialist C in Computer Science

07/22

Description:

The work focused on the development of API web services to carry out the management of all the information received and transmitted by the corresponding entities. The system architecture and services include Oracle as a database, in the backend Python with Django.

Responsibilities:

- Implementation of Api web services in Python with Django
- Implementation of GitLab for version control or performing peer code reviews.
- Obtaining knowledge of the operation of the entity's different processes to carry out the development of services and systems.

Technologies:

- Python, Django, Django Rest Framework, Oracle, PostgreSQL, GitLab

Education

University of Computer Sciences (Havana, Cuba)

2013 - 2020

Computer Science Engineer
